"Peculiarities of the Epidemic of Typhoid Fever in the Zywiec Area in 1963."

Warsaw, Przeglad Epidemiologiczny, Vol 19, No 2, 1965; p 256.

Abstract: Severe epidemic from mid-February to the beginning of June 1963; the epidemic centered in a large apartment house where out of 806 inhabitants, 124 were ill and 88 definitely diagnosed as having typhoid fever; from 79 of the latter S. typhi phage type E1b was isolated; 31 carriers of the same phage type organism were detected and treated with chloramphenicol but 5 of the supposed carriers fell ill during the period of hospitalization; eventually the carrier state could be cured in all but one of the 31. The epidemic was apparently transmitted through the drinking water. Presented at the 3rd Scientific Assembly of Polish Epidemiologists and Infectologists, 5-6 Oct 64. [JPRS]

TOPIC TAGS: epidemiology, digestive system disease, sanitation, bacterial disease

Section 1. Book Information

Section 1.1. General information about the book:
 Authoritative I. performance, Voronezh University, Voronezh, No. 1
 Information and its content. Material Collected Scientific Works, No. 1
 Kiev, One thousand books, 1959. 107 p., 3,000 copies printed.

Ed.: V. Demchuk, Yu. K. Ovsyannikov, Scientific Board: P.M. Melnik
 (Chair Ed.), N.N. Chernenko, O.A. Kravtsov, T.A. Orlov, (Rep. Ed.),
 L.S. Slobodan, and N.V. Yarilin.

PURPOSE: This collection of articles is intended for scientific and technical workers and for students of schools of higher education specializing in automation, metallurgy, and computers.

CONTENTS: The collection contains papers on the automation of metallurgical, chemical, and power engineering and on the development of new instruments, telemechanical units, and a program control system for current lathe. A bibliography on automatic analysis of solvents containing 65 items: 22 Soviet, 54 English, 5 German, 1 Polish, 1 Italian. No publications are mentioned.

SOV/102-58-4-4/11

TITLE: Direct Summation of Currents in Differential Line Protection

PERIODICAL: Avtomatika, 1958, Nr 4, pp 38-45 (Ukr.SSR)

ABSTRACT: The system is one in which no extra reactors or resistors are used with the three current transformers inserted in the lines (see Fig 1). The current between points n and m is used to operate the protection relay. Eq (4) gives this current, if all the secondaries are identical. The next section deals with the behaviour if one phase is short-circuited; the Table presents the effective impedances of the transformers (A, B and C) when there is
a) a three-phase short, b) a two-phase short, and
c) a one-phase short. The rest of the paper deals with
the actual current sensitivity of the system.

Title : Studies on Removal of Shives from Seed Flax Utilized in the
Paper Industry.

Orig Pub: Prace Inst. cellul.-papiern., 1955, 4, No 2, 34-38.

Abstract: In pilot-plant scale experiments on the removal of shives (I) from straw and stems of seed flax, in a decorticating machine, a tow (II) was obtained containing around 20% I. Yield of II from stems was of 14.7% on the basis of the weight of starting raw material, from straw it was of 9.9%. The content of I in II from straw was less (18.1%) than in that obtained from stems (26.2%). Average weight length of fiber from
